PS No.	96
Project Title	**Student Feedback Analyzer**

Problem Statement	Read feedback.csv (StudentID, Rating 1-5, Comment). Show average rating, rating counts, Positive (4-5), Neutral (3) and Negative (1-2) percentages and the top words in comments (remove stop words: and, but, the, is, a, of, too; ties alphabetical).
	Language: Python 3 **Concepts:** Strings, Pandas, Frequency Analysis, Visualization
	Note: S1,5,Great teaching and clear notes
	Note: S2,4,Clear explanations and good examples
	Note: S3,2,Too fast and notes unclear
	Note: S5,3,Good but too fast
	Sample data (3 columns, 2 rows):
	`StudentID,Rating,Comment`
	`S4,5,Great examples`
	`S6,4,Great notes`

Test Cases / Case Statements (4 cases)	**INPUT** / **EXPECTED OUTPUT** **Test Case 1: Normal Input** File: feedback.csv (sample above) Menu: Summary and top 3 words Valid feedback: 6 Average rating: 3.83 Ratings: 5 -> 2, 4 -> 2, 3 -> 1, 2 -> 1, 1 -> 0 Top 3 words: great (3), notes (3), clear (2) **Test Case 2: Boundary / Minimum Input** File with one row: S1,5,Great Menu: Summary and top 3 words Valid feedback: 1 Average rating: 5.00 Ratings: 5 -> 1, 4 -> 0, 3 -> 0, 2 -> 0, 1 -> 0 Top 3 words: great (1) **Test Case 3: Invalid Input** Sample file plus two extra rows: S7,6,Nice S8,abc,Nice Warning: Row 7 skipped - rating must be a whole number from 1 to 5. Warning: Row 8 skipped - rating must be a whole number from 1 to 5. Valid feedback: 6 Average rating: 3.83 **Test Case 4: Different Valid Scenario** File: feedback.csv (sample above) Menu: Sentiment Positive: 4 (66.67%) Neutral: 1 (16.67%) Negative: 1 (16.67%) (bar chart is displayed)
Bare Minimum Requirements	1. Write the solution in Python 3 (one .py file) and run it from the console. 2. Read feedback.csv using Pandas and handle a missing file. 3. Validate ratings (whole number from 1 to 5) and skip invalid rows with a warning. 4. Calculate the average rating and the count of each rating. 5. Test the program with all four test cases.
Instruction	1. Understand the problem statement and define the problem clearly. 2. Develop the solution using proper logic and programming concepts. 3. Implement all required features and pass the given test cases. 4. Test and debug the project to ensure correct output. 5. Prepare the documentation/report and upload the code and report to GitHub. 6. Complete and submit the project within the given deadline.
